TO WHOM IT MAY CONCERN

We are one of the largest MEP engineering companies in New York City. We have used the MEP coordination services provided by Ziggurat Solutions in a number of projects, comprising residential buildings, commercial buildings, and hotels.

Under a typical scenario, Ziggurat staff becomes part of the design team of our projects, and works interactively with all of the members (architects, structural engineers and the developer). Ziggurat's role is to identify conflicts and mistakes in the construction documents (AutoCAD drawings) prior to the construction and they do this very well. Ziggurat's service is provided through a series of review sessions with findings presented to the architects and engineers. Separate sessions with the team-members are also common. The idea is to go to construction with well coordinated design documents, free of painful re-designs and costly surprises.

Thus far, we have collaborated on about ten projects. Ziggurat has been very helpful in identifying MEP conflicts as well as structural design problems. They have proven their efficiency on some of the most complicated projects we are working on, and we are planning to involve them in our future projects.

Ziggurat provides a turn-key service eliminating a need for Cosentini to acquire the technology or go through training. Work is performed using our standard DWG drawings and results are returned to us in colorful 2D and 3D images that enhance Ziggurat's findings and help with immediate implementation.

Our clients are happy with the results and so are we.

Please feel free to contact me with any questions.
